

STRENGTHENING COMMUNITY COLLEGES TRAINING GRANTS PROGRAM (SCCTG)

THE PROJECT

This project is funded through the *U.S. Department of Labor*, Strengthening Community Colleges Training Grants Program. The grant funds help community colleges train local students in key industries like manufacturing, health care, shipbuilding, and nuclear energy. This keeps workers employed locally and bolsters important industries in places that need skilled workers.

PRG supports current grantees by providing PRG Insight, an electronic data collection, reporting, and visualization system.

SETTINGS & PARTICIPANTS

PRG works with SCCTG grantees across geographic areas. Participants are students in qualified training programs at community colleges receiving grant funds.

After students complete training, they can then find stable, high-wage jobs in their local communities and local industries can thrive with a skilled workforce.

PRG Insight allows teams to track progress toward their goals and react quickly and effectively to trends in their data.

THE PROGRAM

SCCTG grants provide funding to community colleges to fund training programs across many industries including advanced manufacturing, shipbuilding, and health care.

Participant Individual Record Layout (PIRL)

The Participant Individual Record Layout or PIRL is a set of data elements which SCCTG grantees are required to collect and report back to the *U.S. Department of Labor*. The data are reported through an online system called (WIPS). With PRG Insight, SCCTG grantee teams can enter all program data in a simple online form, and the PRG Insight team takes care of reporting in WIPS.

PRG Insight for SCCTG

In addition to online data collection of PIRL elements, PRG Insight offers the SVAMP team a real-time data dashboard where they can track key metrics about their program and progress toward their goals. The dashboard is interactive and acts as a single location where program staff can check their data and easily update student records and see changes reflected in real time.
